Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schulte et al '205 in view of Griffin '965.

Schulte teaches a catheter which has three defibrillation electrodes thereon, as well as pacing/sensing electrodes, see especially figure 13. Griffin teaches the use of electrode arrays in a atrial defibrillation catheter. Such arrays have been shown in the prior art to be effective for defibrillation, and can allow for customization of the defibrillation waveform pulse in ways that a solid defibrillation electrode cannot. Further, spacing of the arrays on a catheter is a function of the size of the patient's heart, and therefore one of ordinary skill in the art would realize that a variety of spacings is encompassed by the disclosure of the above cited patents.

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ideker et al '553 in view of Griffin '965.

It would have been obvious to use electrode array type electrodes, as shown by Griffin, in place of the defibrillation electrodes of Ideker for reasons mentioned supra.
